

Our vision

We want to provide a step change for transport and to see a thriving county, within which people can travel safely, and conveniently using a wide range of fully linked travel options from car to bus and cycle to train.

To this end we have produced a forward looking LTP that has a clear vision to move transport into the next decade and beyond. We will strive for continuous improvement and achievement by leading Cambridgeshire towards an integrated transport system for the future that the county can be proud of.

Vision for Cambridgeshire

We have an ambitious vision for transport where the transport needs of the people of Cambridgeshire are catered for – from the most isolated rural village to the historic Cambridge city centre. We will aim to improve people's quality of life, whilst at the same time protecting the County's unique environment and countryside so that it can be enhanced and enjoyed by all.

Cambridgeshire residents will play a major part in producing this vision and improving on it with their own ideas.

We want to see a transport system that:

- provides a springboard for the continuing prosperity of Cambridgeshire
- recognises and meets the social needs of its residents and visitors
- is accessible to all, and is easy, clean and safe to use
- provides a choice of options that link seamlessly from one form to another
- is innovative, efficient and affordable
- reduces congestion but recognises the needs of the car user
- encourages a healthier and more sustainable Cambridgeshire
- allows the growth in the county to take place in a sustainable way.

We will achieve this vision through the development of improved transport infrastructure and services, driven by this revised Local Transport Plan.
